### Why Bearings Fail...

In a study conducted by the bearing manufacturer SKF, over 50% of bearing failures are the result of improper lubrication.

## ✓ENGINEERING AND DESIGN    ✓SERVICE    ✓TROUBLESHOOTING    ✓CONSULTATION    ✓INSTALLATION

• In-plant audits and inspections - Focus is on finding applications and opportunities to improve operations through reliability-based technologies and services.

• In-plant product and application seminars - Introduce specific technologies and methods to all team members tasked with improving reliability

• In-plant training - Customer location-based training on lubricants, lubrication equipment, methodology, best practices, contaminations, remediation, and storage/environmental

• Warranty services - provide complete warranty on all products and services to ensure the highest quality received and utilized by the customer

• In-plant service and support - Provide necessary on-site support to repair, rebuild, and change our products to maintain utilization and reliability

• Turn-key Installations - Compliment our reliability technologies with expert installations to ensure optimum functionality and warranty support

• Annual service agreements - To provide, on a predetermined basis, a scheduled set of times and intervals for inspecting and reviewing systems, components, inventories, and training needs
